

Present Nano, Ian\*, Marc, Jan Sona, Roberto, Cosmin, Walter dJ, Jules, Reimer, Paolo, DG.  
 Remote. Adel, Miroslav, Eric Yen., Vladimir, Jani, Anders N., Jan Chvojka  
 + Jens, John Keintey, Ronald Osune, Dennis.

Eric Yen APGrid PMA update. — see slides.

DG. hard to get rid of CR, also true for Anders.  
 set up of a catchall IP for RES countries → also for users?  
 CHARM has a similar Guest IdP with low demand.  
 commercial IdP? charging model.

Paolo ante-ressure to cloud working, also for non-cloud. No stress.

Jules PRACE ops meeting on TCS: preferred selection still confusing.  
 Walter will follow up Jules (next to Vincent Riballer).

Cosmin TCS only for servers. Federation is not taking off yet.

Roberto wants to get rid of the CR, but the decline is very, very slow...  
 loose users remain an issue, as everywhere else.

Reissuance of new root needed, +15 yr. post retirement.

Jan/May 2016: self-audit + redesign.

Marc no updates still. No TCS etc. that's to GridFER.

move to ministry still ongoing.

Nano TCS will be tested, but in parallel to LIP → same reasons, no full  
 switch not possible. Fully, like others.

JAGPMA see slides.

RPS → end of looking.

Cosmin. S/A ? SCRE → nothing happened, ~~new~~ new CPS from Emir ~~sent~~ sent last week  
 to Jan N, see mail o/p

? MARCI → no news, not many changes needed.

✓ EERN → done.

✓ PKGrid → Nebil confirmed, declare success!

Cosmin

? BG READ. new CPS/doc will be sent incl. Panel's comment.  
As reviews + DLG.

- ? AstronGrid : still waiting on CPS.
- ? IRAN Grid : after ste-2 issues, will restart, after the Incident.
- ✓ MaGrid : review done.

ACT

- PL-Grid : one more check on O.D robot issue by DG.
- ?? Ulfes : no news.
- ? CALG : hibernating, ~~ok~~? wait.
- ✓ NIF : declare success ✓
- X ArmeSFE : need to restart.
- X Belnet : should restart, or set up a catch-all IDP for UDP/USB within Belnet itself.  
Decommission the CR

Coffee 11<sup>00</sup>-11<sup>30</sup>

Sam/SIGNET see presentation.

Reimer: Open EP using <UEXGEN>? It's going away in Chrome + FF  
SIGNET based on forge.js and based on (@codewiz) scripts in portal.  
See EGI TF Helsinki presentation by John Kewley + Denis Nork by David Meredith, testing by John.

Share pointer to list → lots of interest. → istf-general@

-and Edge does not do ActiveX

• Chrome on Windows has broken keggens since it cannot write to the OS key store.

• beware that HTML5/js cannot set file permission on e.g. privkey.

RATCC

help @usala out? For RATCC

add ticketing system? Iain to try that will also for CSIRT

Re-use for RATCC? Iain to check.

:-)

Walter to help out!

not all RATCC members need to join the RAT.

Preferably re-run yearly - good for RP's.

Paolo. IOTA STS EA → see slides

edugrid/authN@CERN already enabled - [for 'limited' account?]

mapping of edugrid/authN 'a-account' to VOMS based on ePPN. not in SSO.

- but user enrolment in VOMS still based on user sent? still clientauth.

- client app (FITS) is ~~generating~~ <sup>gets a</sup> key pair, client → STS → ~~proxy~~.

- ~~webFITS is acting as the client repo. as per P11P~~

- ~~web~~ STS generates an 'intermediate' EEC, per PKP, and

then throws it away? (should be cached for HSM, see later)

WebFITS generates a key pair to be used for a proxy.

- main concern is IOTA itself - is locked down to STS access only

STS & PKI are different services.

STS authenticates with a client sent.

\* HSM is required, but gemalto key is Oie Level 3 FIPS.

keep the issued client EEC's in caching STS

key pair passphrase in memory?

→ will add (cheap) HSM. HSM

- is scope of ePPN checked at SSO? w/ SAML-UD

- for the accreditation, the VOMS binding is out of scope :-)

but for RPs later the checks are good, because their

software cannot yet check VO + CA AuthZ.

} in future generate  
edugrid/authN service.

- expected time line:

- reviewers: Broad Dave W., Sant-Bonnet, Lt-Reimer)

wait for updated version. incl. MSRE (end of the month)

with updated terminology.

RPS./DG.

introduction

edit live. -- changing CP's is seldom -- so RPS can then change  
upload to Wiki

Meetings

- Jan 18-19 Bratislava
- May 9-11 Ankara
- Sept Geneva/CERN.
- Jan 2017. Florence.
- May 2017. Ljubljana?

The o/g

Remote: Ronald, Javier, Peter Muir, <sup>\*\*</sup>Anders, Miroslav, Vladimir, Adel, John Newley, [Dezard?]

09<sup>15</sup> Ronald Osuna / KENET CA.

'Model-AB' arch w/a validation authority of EDBCA.

(see pres #5 : users requesting certs will visit CA and connect over  
'grey cloud')

\* add off-line root

\* reverse DN order.

\* email address should be in SAN. , BDN email must not be used.

target completion by end of next week.

review by ~~and~~ of Oct, Marc + Roberto, iterate as needed.

add root + ICA in macerated for testing by end of Sept. in 1.68.

Great work!

Anders/NG

Not VCS is in Denmark and that has proven difficult.

DeIC is still changing per certificate for servers.

current NorduGrid CA will be replaced (target 1.68 end of Sept) w/a new

CP/CPS, final should be close to NIIF setup.

[The Finnish CoCo + esc issues should be solved]

Deis/WLSC <see slides>

WLAMF is slow (only 3) in taking up RES - only 3 ~~IT~~'s Cordiff

longer SES own portal has no progress. (Aug 2014 - Aug 2016/17?)

DISC effort is all going to Assent / Moonshot.

14<sup>00</sup> Lof + Tech Q4 see v10 document. uploaded

14<sup>55</sup> LF/AARL < see slides >. AARL2.

16<sup>00</sup> JEP/NAS sust. pressure throug govt. (cf. PRACE/Ireland/pressure).  
most of the catch-all cases are run by the community (EGE, WLCG)  
only ASGE generic (political?)

JEP. - Robot: stand account.  
- different Lof's.

- 2F for MICS/CEAR, others

see also  
Licia's notes.

2 Factor for CEDAR.

2F from 1F for MICS/SICS / DOGWOOD

↳ (2F workshop SPARTZ QN4.)

- "low cost" but assurance of the cut is longer (time!)  
delays make it even more expensive.

- no check back to govt on checked passports.

(4) - user responsibility (or WHO resp.) to resolve.  
at most 400 days (or 11 days) old.  
"user never leaves the user"

2FA → 3FA not needed by RP's yet.

has ELXIR need for 3FA + biometric.

launched but:

"never reviewed assessments."

"How many users need higher Lof" → is @ for SP's.

MICRF: PHI <sup>2FA</sup> was chosen for reason of - delegation  
(mostly technical: →)

- availability (cert is

self-contained, no central  
service that needs to be up)

SP should be consider in requiring 2FA.

ENG + rel PHAB5 Amalinda in 2015

①

Remote: Jens, Savi, Miroslav, Vladimir, Adeel, John Wesley, Renato.

650

Cost of DTP participation by the IdP? That was never assessed by the CA's.

Jens' cost may be misleading, since in the beginning the # of users.

is low (cost / subscriber high).

Some of only a ops cost + H/W.

Cost of LoA is at the user's end. (i.e. if users buy the tokens your cost is low, but if you send them --).

- scale linearly with # users. (but 'active' users, not all potential users)

e.g. from DB.

04<sup>35</sup> PKI Tech. updated

AP Classic updated v5.0 draft.

} see wiki

Jens HLCA - will be simplified (focus on currently feasible use cases).

- upload to Wiki in order to increase exposure.
